

Is Your Data Secure?

iStorage provide compliant solutions that are easy to use, multi-platform and ultra-secure.

- PIN Activated, Hardware Encrypted USB Flash Drives, Hard Drives & Solid State Drives
- ICO and GDPR Compliant Products
- Multi-Platform and Operating System Independent Solutions
- FIPS 140-2 Certified
- FIPS PUB 197 Validated Encryption Algorithm
- Military Grade AES 256-bit Hardware Encryption
- No Software Required
- Dust & Water Resistant
- Brute Force Protection
- Independent User & Admin PINs
- Flash – 4GB to 32GB • SSD - 128GB to 1TB • HDD - 500GB to 2TB

Are you fully compliant with the data protection act?

According to a survey of European IT professionals, carried out by Ipswitch*, more than half of respondents (52 percent) stated that they're not ready for the new General Data Protection Regulation (GDPR) and more than a third (35 percent) admitted that they didn't know whether their IT policies and processes were up to scratch.

- The Information Commissioner's Office (ICO) has the power to fine businesses and government bodies up to £500,000 for serious breaches of the Data Protection Act. This includes the loss of unencrypted USB data storage drives that contains client data.
- The European Union will soon have the power to fine companies €100 million or 5% of their annual turnover if they are found to be in breach of the new General Data Protection Regulation (GDPR). The forthcoming legislation compels anyone who holds data on EU Citizens to implement adequate security measures to protect data from loss or theft.

The NHS falling foul of the ICO.

- The ICO has issued a £150,000 civil monetary penalty to the Nursing and Midwifery Council for breaching the Data Protection Act. The council lost three DVDs related to a nurse's misconduct hearing, which contained confidential personal information and evidence from two vulnerable children. An ICO investigation found the information was not encrypted.
- University Hospital of South Manchester NHS Foundation Trust lost the personal information of 87 patients when a medical student mislaid an unencrypted memory stick.
- South London Healthcare NHS Trust has reported the use of two unencrypted memory sticks. The Information Commissioner's Office (ICO) said in these incidents, the data was put at unnecessary risk by it not being encrypted, but both devices were later found and it is unlikely that they were readily accessible during the time they could not be located.

datAshur[®] personal

Part Number	Description
